Part III DETAILED ACTION

NOTIFICATION OF OBJECTION AND/OR REJECTIONS

Election of Species/Restriction

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

Group I. Claims 1-18 and 20-28, drawn to a switch employing a shared packet buffer memory wherein the memory is operated to cause each incoming data stream to be distributed across the number of buffers, the memory is also capable of simultaneously servicing each of a number of inputs and number of outputs to which the memory is connected, classified in Class 711, subclass 105.

Group II. Claim 19, drawn to a ratcheting distributor for distributing a data stream across a number of memory banks, classified in Class 711, subclass 154.

The inventions are distinct, each from the other for the following reasons:

The invention of groups I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, the invention of group I has separate utility such as a data distribution system utilizing a switch within a network wherein at least one local computer provides a user interface and

performs local data processing to interact with at least one remote computer which implements data processing within a generic time-sharing environment in response to the local computer to transfer data between the local computer and the remote computer, and is not limited for use with a ratcheting distributor of group II. Similarly, the invention of group II can be used as a data distributing mechanism a generic data processing system utilizing a rotating selector to distribute data in a round-robin scheme and is not restricted for use with the switch employing a shared packet buffer memory wherein the memory is operated to cause each incoming data stream to be distributed across the number of memory buffers/modules of group I. See M.P.E.P. § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and recognized divergent subject matter, and because the search required for one group is not coextensive with the search required for the other groups, restriction for examination purposes as indicated is proper.

2. Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed.

3. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently

named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(h).
